

How to install custom fonts

Description

This guide explains how to install custom fonts on your premise installation.

Requirements

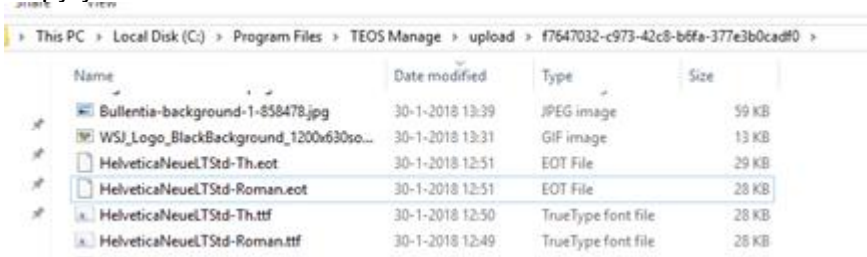

- Have the font file available in .ttf format
- Have the font file available in .eot format
- Access to the TEOS Manage Server
- Access to the SQL Server with TEOS Databases
- Access to the TEOS web interface

TEOS 3.2.0 and below

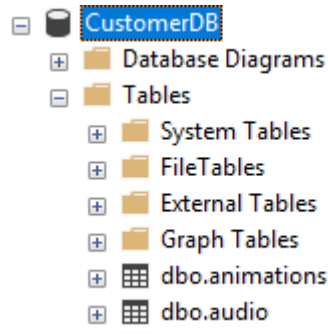

1. Log into the TEOS Manage server and navigate in Windows Explorer to:
C:\Program Files\TEOS Manage\upload\f7647032-c973-42c8-b6fa-377e3b0cadf0

(or an alternative path if TEOS installed in a different location)

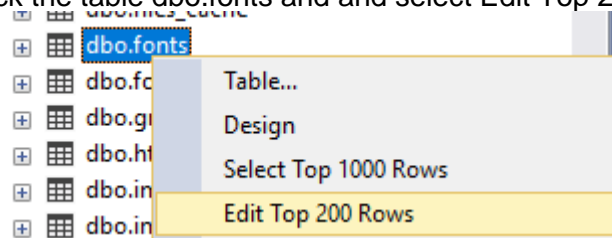

2. Copy your font files into this folder

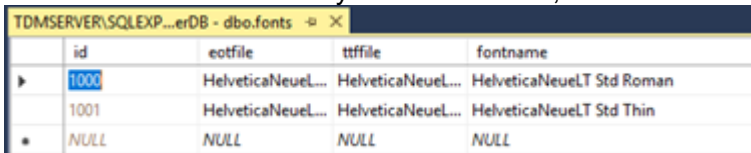

3. Log into the SQL Server and expand the database CustomerDB and open the list with tables

4. Right click the table dbo.fonts and and select Edit Top 200 Rows

5. In the new Window enter your eotfilename, ttfilename and the Font Filename.

A screenshot of a SQL query window showing the results of a query on the 'dbo.fonts' table. The table has four columns: id, eotfile, ttfilename, and fontname.

id	eotfile	ttffilename	fontname
1000	HelveticaNeueLTStd-Th.eot	HelveticaNeueLTStd-Th.ttf	HelveticaNeueLT Std Roman
1001	HelveticaNeueLTStd-Roman.eot	HelveticaNeueLTStd-Roman.ttf	HelveticaNeueLT Std Thin
NULL	NULL	NULL	NULL

In content creation your new font is now available for selecting.
