

How to configure LED on tablets

Description

This guide explains how to configure LED on tablets

For this guide a tablet (ProDVX or Qbic) is needed with LED. The firmware of the device needs to be updated to the latest version. For guide's on how to update firmware please view "Firmware" Also make sure the settings on the device have been setup correctly. For this guide a ProDVX 10XPLN will be used.

Requirements

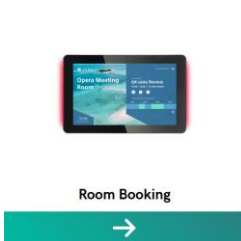

- A tablet with LED
- Access to Workplace solution > Room Booking

How to configure LED on tablets

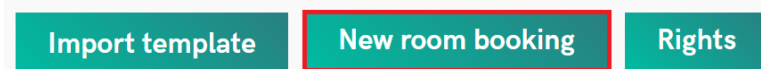

1. Login to TEOS Manage
2. Head over to “Workplace solutions”

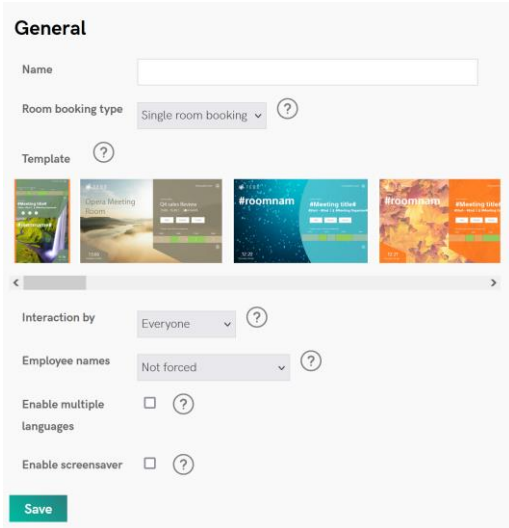

3. Select “Room Booking”

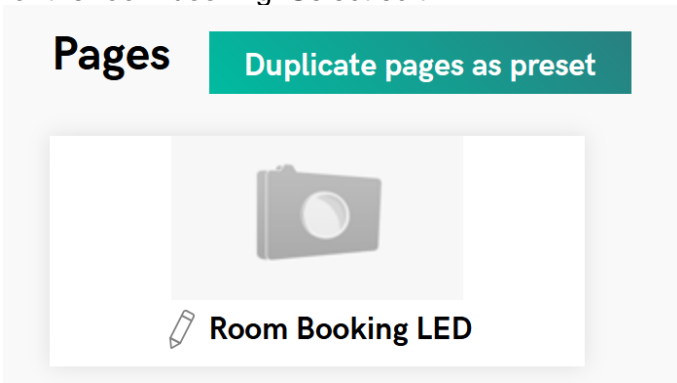

4. Select “New room booking”, or if you already have a room booking solution select it.

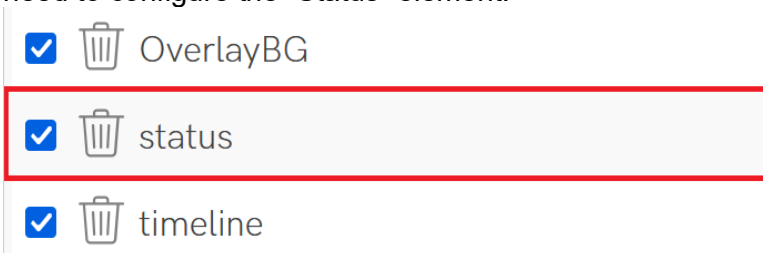

5. Select a name and template and click “Save”

6. After selecting save the tab “Pages” will appear, here you can edit the page that is being used for the room booking. Select edit.

7. Now the page is opened of the room booking, on the right side we have all the elements. We need to configure the “Status” element.

8. Navigate to “Behaviour”

9. In here is an overview of the actions can be preformed with the status of the room booking.

Meetingroom Save ×

General Layout **Behaviour** Streaming Touch Visibility

Type: Status

Visible:

Use LEDs: ?

Color room available: #00e600 ?

Color room occupied: #e60000

Color check-in period: #e6e600

Calendar: Select an option

Note: Some devices might not be able to display all RGB colors, so color produced might differ (f.e. the first TEOS Book (DSQ) tablet has no blue led)

- **Type**
Here you can select the type of behaviour need to change the LED's. For this we will keep this on "Status".
- **Visible**
Decides if the status is visible in the room booking page.
- **Use LEDs**
Option to enable LED if this is supported on the connected device. Enable this.
- **Colour room available**
The colour the LED should take if the room is free.
- **Colour room occupied**
The colour the LED should take if the room is occupied.
- **Colour check-in period**
The colour the LED should take if the room is in the check in period.
- **Calendar**
Select on which external data source (Calendar) it should base its data on, we will skip this because we already get the status from the room booking.

10. We now see that the tablet will display red LED when the room is booked in a linked calendar with room booking.

11. To setup Room Booking please view “TEOS Room Booking - Installation & User Manual”
