How to create content with a data source

Description

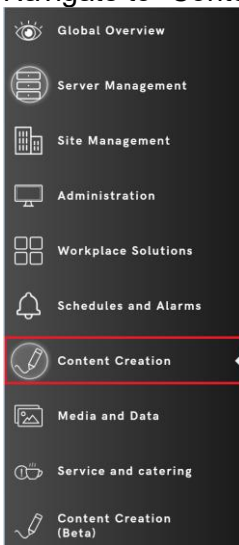

This guide explains how to create content with a data source

Requirements

- Access to “Content Creation”
- Have a data source

How to create content with a data source

1. Login to TEOS Manage.
2. Navigate to “Content Creation”.

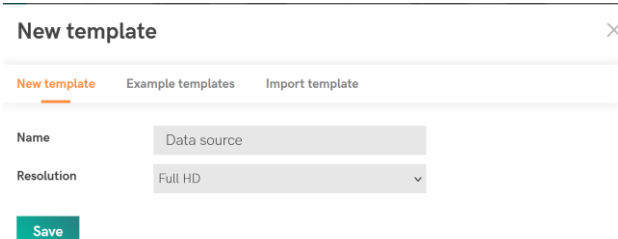

3. Select “Templates”.

4. Select “New Template”.

5. Give it a name and select the desired resolution, and select “Save”.

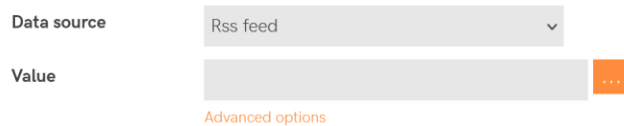

6. Create an element in the page based on the data source you want to add.
So when you want to add a weather icon you need to add an image, and if you want to add a date you need to add a text block.
7. When creating an element, a pop-up will appear about the properties of the element, we will give it a name and navigate to “data”

Textblock

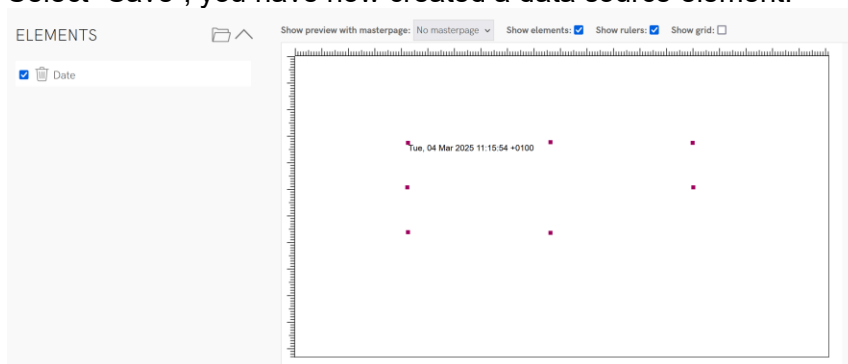

8. Here we can select a data source, after selecting a data source an option called “value” will appear.

9. Select the 3 dots, a menu will appear with selectable value's based on the data source, select the desired value.

10. Select “Save”, you have now created a data source element.

If there are any problems or questions, please contact TEOS Support.
