Mirroring for TEOS

Installation & User Manual
Document revision 1.2

Overview

This document will explain how to use "Mirroring" option under Manage for TEOS server. To use this feature, you will need at least Manage for TEOS Server license (TEM-SRV250), at least a control license for the device (TEM-CO10 Including control and maintenance options) and a Connect for TEOS license TEC-SC100

Requirements

- Manage for TEOS 2.1 minimum
- please refer to the release note to check for the latest version of Connect for TEOS Receiver app
- License required: TEC-SC100 (Connect for TEOS) for BRAVIA and Android player
- For Manage for TEOS configuration/app update use a control license TEM-ELxY

1.Mirroring for TEOS workflow

Mirroring for TEOS option under Manage for TEOS will allow you starting Manage for TEOS version 2.1, to assign a Connect for TEOS (casting feature proposed under TEOS offer) license to a device BRAVIA or Android player. You will be able to show the welcome page of Connect for TEOS from TEOS settings (workflow for TEOS Player, for BRAVIA the welcome page Is used with Meeting Room App). The last option for this feature Is the possibility to create your custom Connect for TEOS Interface (using your own background for example) and assign It to a device.

Connect for TEOS architecture with BRAVIA
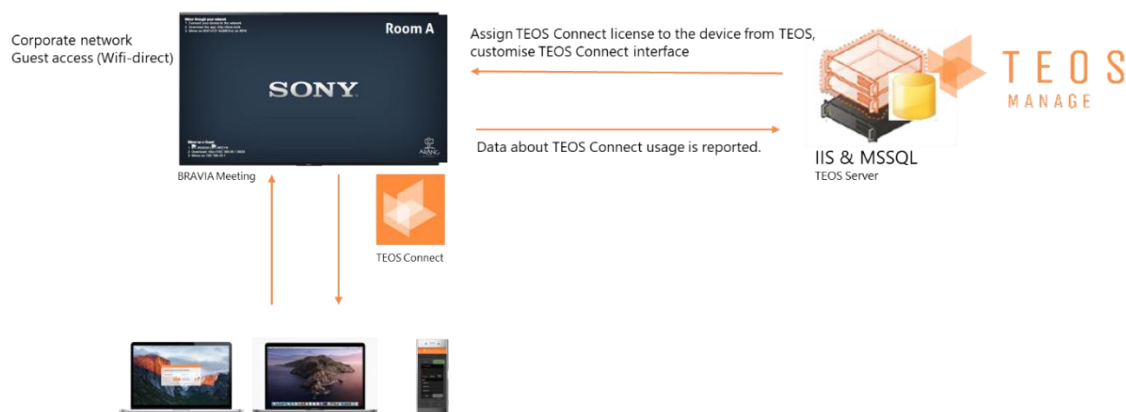

Connect for TEOS architecture with Android Player

Manage for TEOS Server Is required to use this feature.
Connect for TEOS Receiver can work In standalone mode with two different templates for BRAVIA (with the possibility to change background with MRA) and one for the player

SONY

# 2. Configuration of Mirroring from Manage for TEOS

2.1. Create a Mirroring Interface under Manage for TEOS
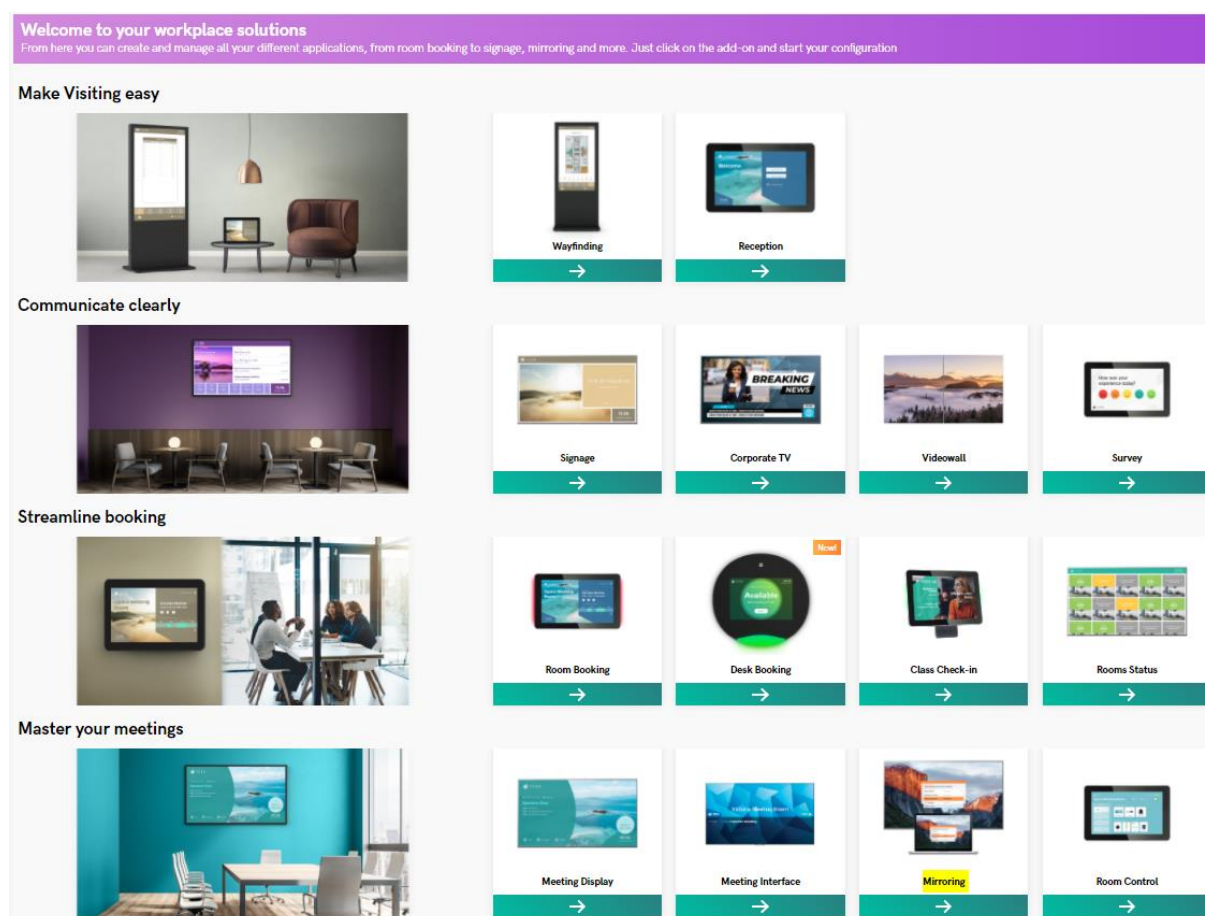

Create a new Mirroring solution by clicking on "New Mirroring Solution"
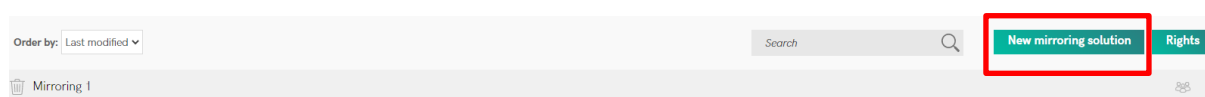

When creating, just assign a name and press save. A default Mirroring template will be shown. Click on the name below the template to open It an customize.

SONY

You can use the special element "Mirroring" where you will automatically generate:
- The SSID (WIFI direct),
- The SSID password
- The IP Address of the device
- The device Name

Without additional text (updated older version of Connect for TEOS)
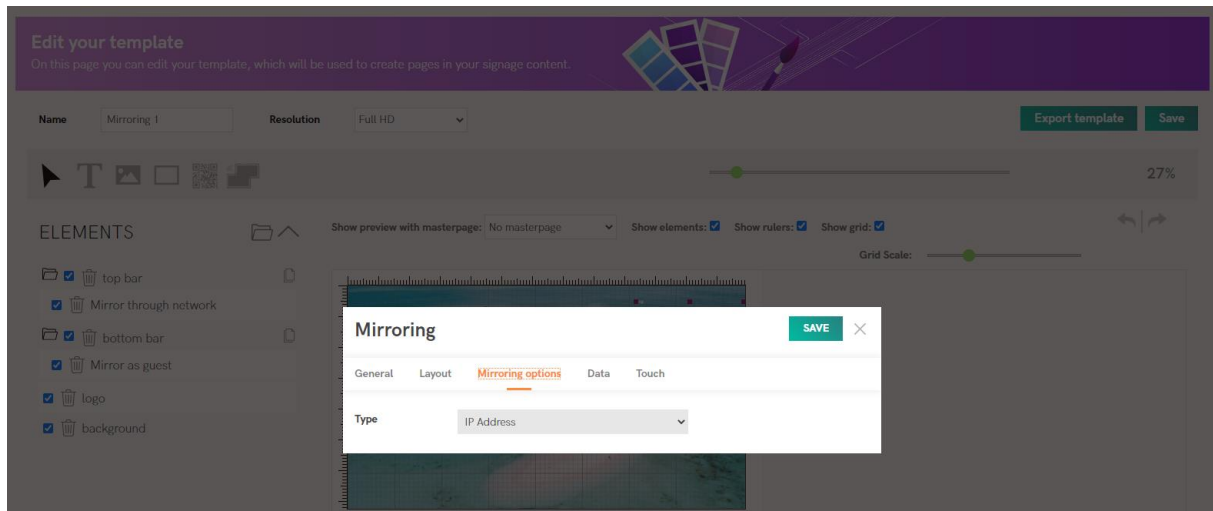

The result is shown automatically in the device. Additional text, image, design can be customized

2.2. Install Connect for TEOS Receiver App on your device

To assign a license into to a device, make sure you have at least Connect for TEOS Receiver app version 1.9.6.2. You can Install or update the app following the device documentation or Install the apps directly from TEOS.

SONY

From Manage for TEOS version 2.0, you can verify the TEOS apps version, update them or install them.

To do so, go to your Manage for TEOS web interface> Site Configuration> Service Management

Updates or installation of the apps can be done manually, by scheduling them one by one, or by group. Please note for the first connection with the device, you will have to authenticate the connection with TEOS Server by accepting the request the pop-up message of the player.

If your server is connected to the internet, you can directly get the latest version of apps from our Cloud app server. If not, you can always upload the apps that can be sent to you.

2.3. Assign a Connect for TEOS license to your device

Starting Manage for TEOS version 2.1 you will have the possibility to see your Connect for TEOS licenses under Manage for TEOS. You can check your licenses available under server management.
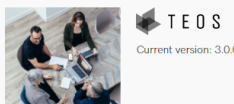

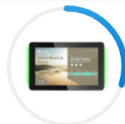

Go to Administration and select the device   where you want to assign a Connect for TEOS license and template. Click on edit and select Mirroring Settings

SONY

Check the box "Use Connect for TEOS license"   to assign the license to your device.
By clicking on "Show Welcome Page", Connect for TEOS App will show directly the Interface under the App (for Android player usage).
When using a BRAVIA with Meeting room App, no need to select "Show welcome page", you must assign in Meeting Interface the webURL from Connect for TEOS web server:
http://127.0.0.1:9020/bg.html if you want to show your TEOS interface done in TEOS
Select the Mirroring template created before to assign It to your device.

Save your configuration and press on play button (update screen), your Connect for TEOS App will be setup on your device.
